

TEIKINTM

PT Edico Utama which was established in 1973 is a global manufacturer of automotive engine components using the brand TEIKIN. TEIKIN has always been committed to deliver only the highest quality products accompanied by outstanding service dedicated to our customers worldwide, being available in more than 150 countries. TEIKIN high precision engine components are manufactured using state-of-the-art proprietary technologies, with Numerically Controlled Machines and Integrated Electronic Resource Planning (ERP) Production & Quality Management System.

Our products consist of pistons, piston rings, cylinder liners, and engine gaskets. Our pistons are able to attain the perfect balance of weight and strength as a result of the applications of our unique fine-grain structure composite with excellent mechanical properties. The piston rings are produced to a very strict standard so the components can perform in synchronized harmony. Our liners are made of high-density homogeneous structure of material to ensure excellent performance in an environment of extreme pressure and temperature that exist in the latest high performance turbo diesel engine. Our gaskets are produced to a very strict standard by employing perfectly composed micro-structured material

At TEIKIN, Research and Development functions are conducted via an organized network of well-trained professionals spread across various departments. We have also achieved ISO certifications, a concrete example of TEIKIN's philosophy in conforming to the highest standard of quality management.
